GE's Cameras securing the 2008 Expo in Zaragoza

Expoagua Zaragoza

Expoagua Zaragoza 2008 is the company that organised, promoted, managed and ran the Zaragoza 2008 International Expo on 'Water and Sustainable Development'. The Expo was run in partnership with the Spanish Government, the Zaragoza City Council and the Aragon Government.

Customer Challenge

A large number of facilities were built and used for the 2008 world exhibition in Zaragoza. The Expo thus covered a large area which needed to be well secured and monitored. The Expo's management required a video surveillance system that allowed them to monitor everything, everywhere, inside as well as outside, at all times.

Solution

GE Security provided the 2008 Zaragoza Expo with over 350 surveillance cameras and the VisioWave intelligent digital video surveillance platform. This system provided the Expo's management with an efficient way of monitoring and capturing events. To transmit the data between camera and management, the GE Security fibre communications product range was used. With this system, large amounts of data were transmitted at a fast rate, without loss of quality. This solution enabled the Expoagua Zaragoza 2008 to run its exhibition safely and securely.
